Sebastian Hellsing

Application Developer II

Summary

I am a passionate software developer with years of various IT experience. I am currently working for Essendant building and maintaining full stack Java web apps and APIs. I have a proven history of quickly becoming proficient and a contributing team member with any number of tools. I am a problem solver who keeps the big picture in mind while maintaining laser focus on the small.

Experience

Essendant

1 year 9 months

Application Developer II

June 2018 - Present

Denver, Colorado

I am a part of a partially remote web development team responsible for several customer facing applications and APIs .

I take requirements and turn them into features and enhancements to help drive the core strategy of the organization. Working with that goal in mind, I contribute to a scheduled release cycle for several applications, from sprint planning to production delivery.

Work on these applications routinely involve the full stack of several database flavors, Java EE, and various front-end technologies.

Responsible for providing development support for clients troubleshooting and implementing our commercial APIs and web widgets.

Application Developer

July 2017 - May 2018 (11 months)

Greater Denver Area

I am part of a team responsible for enhancing and maintaining several web applications and APIs. I take requirements and turn them into working features

and fix defects in existing ones. The work spans across the full web stack including but not limited to: AngularJS, Java and Oracle/SQL Server.

Primary Responsibilities

Design, Code & Test across the full web stack
Interpret business requirements and turn them into working features.

Manage code changes across multiple projects and repositories.

Provide estimates and dependency information for completion of work.

Collaborate with internal and external teams
Participate in daily scrums and other agile meetings.

Self-Employed
Java Developer
June 2016 - July 2017 (1 year 2 months)
Florida

Full Stack Java Developer working on contract basis.

Developed Java applications to manage active directory users (unlock accounts, add/remove from groups, etc) with Angular front end.

Meridian Asset Services
